

Dirt and Dust

One of the main areas of cause for complaint from the public. What can you do?

- On roads, check if sweepers are suitable for purpose. Are the brushes correctly aligned? Remember to sweep regularly in windy conditions.
- On large dusty projects, use dust busters (turbo fans with sprays) or sprays mounted on to moving equipment to dampen down large areas.
- Check perimeter dust levels using hand held meters.
- Ensure all open trucks and skips using public roads are covered.
- In muddy conditions it is ideal to install a wheel wash, or jet hose wheels before leaving.
- Conduct regular litter picks – even if the rubbish is not yours, it can reflect poorly on the site's image.
