

Safety innovation

Keepmoat is committed to continuous improvement in health and safety standards, setting clear objectives with effective and regular reviews of performance.

As well as complying with all relevant regulatory and legislative requirements and codes of practice, we continually strive to create innovative health and safety solutions and our site team working in Sutton have done just that.

In addition to using portable signs to establish working areas when carrying out internal refurbishments in occupied properties, the team have come up with the innovative use of branded child safety gates to establish working exclusion zones.

Where fire doors are not present, the operatives install a visually prominent child safety gate to prevent residents accessing areas of work, whilst additionally providing temporary containment of residents' pets.

"This brilliant safety innovation is a great example of how our site team is able to come up with ideas to resolve issues as they arise and will ultimately improve the safety of both residents and operatives."
