

BREATHE CLEAN AIR

USE DUST EXTRACTION OR WATER
SUPPRESSION EQUIPMENT

- Use tools with dust extraction for cutting or drilling wood, stone, blocks and kerbs
- Use application Class H or M filter dust control units, not ordinary vacs
- Use water suppression equipment to control dust
- Use properly fitting PPE as a last line of defence

 **Speedy** One Plan™

EXPECT THE UNEXPECTED

COMPETENCE IS REMEMBERING THAT EVERY DAY IS DIFFERENT

- Check your surroundings because things change all the time
- Never make assumptions and avoid complacency
- Consider the additional risks from new tasks and unfamiliar surroundings
- Competence is skills, knowledge AND behaviour

KNOW YOUR ENEMIES

ASBESTOS, SILICA, STONE, CEMENT, CHEMICALS, WOOD, MOULD, ISOCYANATES, WELDING FUMES AND SPRAYS – THESE PARTICLES CAN KILL

- Around 30,000 people a year, across UK industries, suffer from work-related breathing and lung problems
- Don't let dust get airborne
- Use dust extraction, water suppression, monitoring and PPE equipment
- Asbestos fibres are particularly dangerous and require specific training and specialist control

 **Speedy** One Plan™

SPOT THE INVISIBLE KILLER

**AIR MAY LOOK CLEAN BUT IT CAN HARBOUR
DEADLY PARTICLES**

- Around 8,000 people a year die from asbestos-related diseases and Chronic Obstructive Pulmonary Disease (COPD)
- Tiny particles of invisible dust lodge deep in the lungs
- Observe the three key risk assessment principles - avoid, prevent, minimise
