

Safe, secure and simple, the Jackpad<sup>®</sup> Support System is a proven alternative to traditional concrete foundations for modular and portable buildings.

## Modular Building Support System

- Cost effective
- Manufactured from 100% recycled materials
  - plastic and steel
- Fully height adjustable
  - no shims required
- Custom designed adjusters
- Tried and tested system
  - in use for 12 years
- Minimal remedial works
- Reduced installation time
  - typically 1 day
- All weather installation
- Available for sale and hire
- Especially suitable for compact sites
- Full installation/removal of Jackpad system available
- Ability to support single, double and treble storey modular buildings

Modular & Portable building foundations  
for the greener thinker

ARE YOU  
A GREENER  
THINKER?

Traditional concrete foundations

- Zero landfill
- Assist in achieving sustainability targets
- UK Manufactured
- Available for hire and purchase
- Every tonne of plastic recycled saves 1.5 tonne of CO2 emissions.

Jackpad<sup>®</sup> Support System

## COST EFFECTIVE SOLUTION

- No requirement for plant or machinery
- Reusable
- Reduced installation **costs and time**
  - typically 1 day
- Reduced reinstatement **costs and time**
  - typically ½ a day
- All weather installation
  - including snow
- Varying system set-ups with maximum safe working loads from 48kN up to 295kN
- Available for purchase and hire
- Positions can be moved to enable the use of a more cost effective crane
- View Jackpad installation for 20 bay modular at [www.jackpad.co.uk](http://www.jackpad.co.uk)

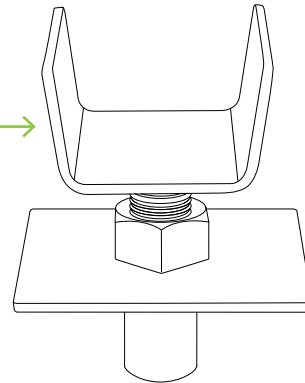

## THE SYSTEM

The Jackpad system comprises of three elements:

### **The Adjuster**

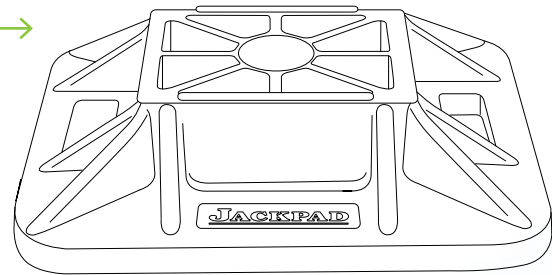

Consisting of two parts, the painted steel adjuster provides final adjustment of the system. The base plate is universal to all applications. The receiving plate incorporates a 42mm thread and nut and can be designed to suit any client's product.

### **The Jackpad 400 support block**

At the heart of the system, the Jackpad 400 support block takes a vertical load and disperses it through its base. The Jackpad support block is manufactured from recycled plastic and is 100% recyclable.

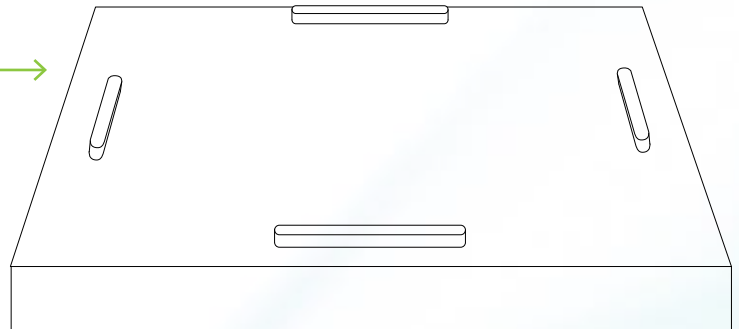

Dimensions: 360mm x 360mm x 80mm

### **Incremental Packers**

Also manufactured from recycled plastic, the incremental packer provides a simple solution to overcome fall of ground. Fitted with interlocking lugs, the incremental packers are stable when in multiple use.

Dimensions: 450mm x 450mm x 50mm
