

Engagement Action Bulletin - Learning from Safety Action Groups

Date:	26/02/16	Originator:	B McCrudden	SAG / Region / Contract:	New Hyde Primary
Title:	Secured Hi-Viz Walkways				

Ensuring that there is a safe mean of access to site for foot traffic is something that we strive to do successfully on a daily basis but it can be a problem when people insist on cutting through barriers or moving them all together to take a short cut across a work area.

On the Hyde Primary School Project in Tameside we decided to try and counteract this issue by using the scaffold protection that was being used on site, this was fixed continually down the walkway firstly to ensure enhanced difficulty of removal but it also serves as a high visibility line of separation.

During our last Considerate Constructors Audit the auditor commented on our walkways and stated that he thought this was an innovative idea.

This Bulletin is a result of Worker Engagement Feedback at one of our Projects

Is there anything you can be doing differently as a result of this bulletin?
