

## Environmental Innovation at Cremorne Wharf Depot – Eco-bricks

The site team wanted to contribute to reduce the single use of plastic and give a second life to something that otherwise would be thrown away. HOW?

Implementing a very simple solution to re-use plastic bottles and packaging ready to be discarded and turn them in Eco-bricks.

An Eco-brick is a reusable building block created by packing clean and dry used plastic into a plastic bottle to a set density.

At Cremorne Wharf Depot we are saving and segregating packaging to be put into plastic bottles in order to build a flower pot.

The team has built a wooden box (made of timbers off cuts) to collect the bottles filled with packaging.

This initiative is innovative as it will help to:

- Enable the team to take personal responsibility for our plastic;
- Build green spaces that enrich our community and remove plastic from the biosphere
- Reduce waste
- Raise awareness on the single use of plastic.
