

Fast Fence Ltd – Atlantic Square, Glasgow

Client: BAMTCP Atlantic Square
Architect: BAM Design
Quantity Surveyor: RLF
Project Management: RLF
Structural Engineer: BAM Design
M&E Consultants: BAM Design

Atlantic Square is a development which will comprise two commercial buildings, linked at the ground level by a new high quality urban realm. These facilities will be open to public. To enclose our site perimeter BAM has used Fast Fence; Greenhoard. This type of fencing has various environmental, construction and commercial benefits.

Greenhoard Fence

The panels are made from 100% recycled plastics. Which are manufactured using materials derived from low-grade, mixed waste plastics which are notoriously hard to recycle and therefore would usually end up being sent to land fill or incinerated. This process also allows the boards to be recycled at end-of-life offering a sustainable solution. The natural characteristics are utilised to manufacture hard wearing, smooth faced, versatile boards. The panels are used along with a recycled steel framework which has an expected life span of 20 years just like a scaffold making the whole system reusable and is engineered to perform as an alternative to imported plywood, or to virgin plastic panels, yet in turn being fully recyclable at end-of-life.

Type of contract: Design & Build

Value: £75m

Floor area: 461,000 sq ft

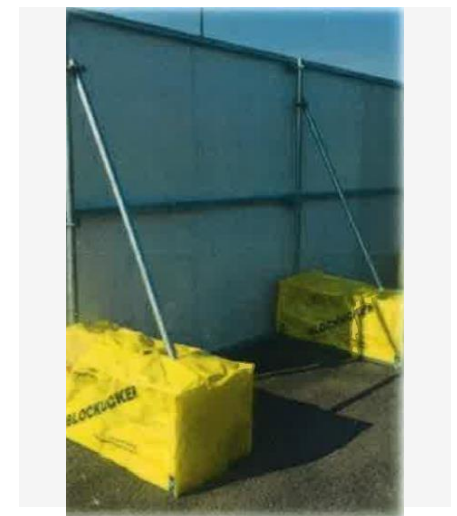

Completion: August 2020

BREEAM rating: Excellent

“quick and easy installation in comparison to the traditional timber hoarding, a step forward.”
Zeshan Afzal – Site Manager

Sustainability Benefits

- Closed loop recycled solution
- Compliant to BS 8903 Sustainable Procurement
- 100% Recycled at end of life
- Zero waste to landfill
- Reduces Carbon footprint of your project
- Increased BREEAM scoring as the whole system is reusable and recyclable.
- Increase Considerate Constructors Score by using materials that are fully reusable, sustainable and recyclable.

Commercial & Construction Benefits

- Stock Management and storage between phases / projects available to ensure reuse.
- Installation service or training for your preferred installer available.
- Avoid disposal and maintenance costs inherent with plywood hoardings.
- Quick and easy to erect, adapt and dismantle.

Graffiti

The panels are made from 100% recycled plastic, it makes it extremely easy to remove graffiti over timber projects.

Blocklocker System

The system has all the benefits of Kelly block without sacrificing the flexibility of our Greenhoard portable system. Kedge can be added according to wind loading calculations and can be manoeuvred using a forklift/slanged or by hand.

- System covers ballast to prevent removal.
- Hi-visibility to prevent trip hazard.
- Fully secured and fixed in to loading tray
