# Fever Screening Solution

Utilising the latest thermal technology, Our all new fever screening solution provides a safe and contactless way of detecting the temperature of an individual entering the workplace.

| +/- 0.3°C | No Contact | 1 Second | Complete |
|---|---|---|---|
| Accuracy | Increased Safety | Rapid Detection | Solution |

## AI Detection

Using the latest Artificial Intelligence, the system focuses on the elevated area of the skin to reduce false alarms by other heat sources.

## Individual/Multi Person Analytics

Whether it's large crowds, fast flowing lines or individuals, the system uses the latest virtual detection and algorithms for accurate data capture.

## Contactless

Using state of the art thermal imaging, no contact is required to gain a temperature reading to assist with social distancing rules and improve hygiene.

## Hassle Free Management

When an alarm is activated, an audible alert is triggered and an email notification is sent in real time along with a thermal and optical activation image.
